

Turkeys

United States
Department of
Agriculture

Washington, D.C.

Released January 14, 1994, by the Agricultural Statistics Board. Estimates refer to Turkeys Raised in 1992-93 and Intentions to Raise in 1994.

Turkeys Raised in 1993 Down 1 Percent

Turkeys raised in the United States during 1993 totaled 287 million, 1 percent less than the 289 million turkeys raised during 1992.

North Carolina ranked first in the number raised with 61.0 million, followed by Minnesota with 42.0 million; Arkansas with 25.0 million; California with 22.5 million; Missouri and Virginia with 21.0 million; and Indiana with 14.6 million. These States accounted for 72 percent of the turkeys produced in the United States during 1993.

Turkey Growers Plan 2 Percent Increase in 1994

Turkey growers in the 20 major producing States intend to raise 2 percent more turkeys in 1994 than 1993 and 1 percent more than 1992. Intentions for the top 7 producing States compared with 1993 are as follows: North Carolina, up 5 percent; Minnesota, down 4 percent; Arkansas, up 4 percent; California, unchanged; Missouri, up 5 percent; Virginia, up 2 percent; and Indiana up 2 percent.

The number of turkeys actually raised in 1994 may vary from growers' intentions shown in this report depending on feed costs, supply of hatching eggs, cost of poults, and prices growers receive for turkeys during the next few months.

For information call Joel Moore at (202) 720-3244. Office hours are 8:00 a.m. to 4:30 p.m. ET.

1/ 1993 Revised.
2/ Excludes exported poults.

Turkeys Raised Estimates

Survey Procedures: Survey data for the turkeys raised estimate are collected from a list of contractors and independent growers during December. States use all known sources of producer names to ensure that the list is as complete as possible. Turkey producers are then contacted either by mail, telephone, or in person. Diligent effort is made to ensure that all operations are accounted for in the estimate.

Estimation Procedures: Turkeys raised estimates include young turkeys intended for meat production, as well as breeder turkeys which reached maturity during the calendar year. These estimates exclude turkeys lost to disease or those destroyed. Placements of turkey poults from the monthly turkey hatchery survey provide the basis for the preliminary estimates published in August. Final estimates, published in January, use indications from the December growers survey in addition to updated hatchery data. Other indications for the final estimates are obtained from monthly slaughter totals and check-off data provided by individual State turkey or poultry associations.

Generally, individual State data are not published if there are less than three operations in a State, or if any one operation has 60 percent or more of the total turkeys in the State. These data are combined into the "Other States" category.

Reliability: Turkeys raised estimates are based on a census of known active producers and, therefore, have no sampling variability. However, estimates may be subject to errors such as omissions, duplication, and mistakes in reporting, recording, and processing of the data. These errors are minimized through strict quality controls in the edit and summarization process, and a careful review of all reported data for consistency and reasonableness.

Revision Policy: Estimates for the previous year are subject to revision when preliminary raised estimates are made in August. Revisions are primarily based on updated hatchery and slaughter data, and at the U.S. level, are usually less than one-half of one percent of the final estimate published in January. Estimates are also reviewed after data from the Department of Commerce's five-year Census of Agriculture are available. No revisions are made after that date.
